

## How Vulnerable is the City of Ocean Shores to Tsunamis?

### The Tsunami Hazard

Ocean Shores faces two types of tsunami hazard:

- Tsunamis from distant earthquakes on the Pacific rim, such as the 2011 magnitude 9.0 earthquake near Japan. This type is the most common. Because the waves arrive hours after the quake, they are less likely to cause loss of life, but may inflict damage.
- Local tsunamis caused by a M8.0 (or greater) earthquake on the Cascadia subduction zone. This type poses the greatest danger: catastrophic waves, much larger than those from a distant quake, will strike the coast within 25–30 minutes, causing loss of life and widespread damage to property.

Much has been done to improve our understanding of tsunami hazards, develop warning systems, and educate the public. If coastal communities are to reduce the impacts of future tsunamis, they need to know how tsunamis will affect their people, property, economy, and infrastructure.

#### WHAT IS THE CASCADIA SUBDUCTION ZONE?

About 100 miles off Washington's outer coast, the Juan de Fuca plate is being pushed beneath the North American plate. An earthquake occurs along this zone when built-up pressure causes the plates to slip rapidly past each other. This massive movement pushes seawater along the zone upward, creating tsunamis at the surface.

All coastal communities along this zone, which extends from northern California to southern British Columbia, will be impacted by the next earthquake and tsunami. The zone has produced earthquakes measuring M8.0 and above at least seven times in the past 3,500 years. The intervals between quakes vary: from as little as 140 years to as much as 1,000. The last one occurred just over 300 years ago. Although scientists cannot predict when the next earthquake will occur, the region is within the window for a significant event.

### Ocean Shores' Vulnerability

To support local tsunami planning efforts, the U.S. Geological Survey and the Washington Military Department Emergency Management Division assessed variations in exposure of 24 communities along Washington's outer and Strait of Juan de Fuca coasts. They considered how much of a community's developed land and how many of its residents, visitors, and businesses are within the tsunami hazard zone. They also considered what percentage this represented of the community's total population and assets.

Ocean Shores, for example, has approximately 7.5 square miles of developed land in the inundation zone. Because this represents 100% of Ocean Shores' developed area, the potential losses from a tsunami and the impact such losses will have on the community are likely to be substantial.

### OCEAN SHORES' VULNERABILITY TO TSUNAMIS

People/Assets	Number or Amount in Tsunami Zone	% of Community Total in Tsunami Zone	% of Those in Tsunami Zone
All residents	5,455	98%	---
Residents under age 5	159	98%	3%
Residents over age 65	1,681	97%	31%
Renters	683	97%	26%
Employees	1,034	100%	---
Businesses	204	100%	---
Sales volume	\$107,987,000	100%	---

## The Most Vulnerable People

All people in the tsunami hazard zone are vulnerable to some extent, but some may be more vulnerable than others. Groups of concern include:

- Children under the age of five: They need direction and help to evacuate and are more likely to develop problems such as post-traumatic stress disorders after a tsunami.
- Adults over the age of 65: They are more likely to have health and mobility issues, to need special medical equipment, and to have limited resources to invest in recovery following a tsunami.
- Renters: Many may be less well prepared for disasters than homeowners and may also have fewer resources to invest in recovery.
- Visitors: Tourists and residents who are visiting public places, such as beaches, museums, medical facilities, grocery stores, and religious centers, may not be prepared for or understand how to respond to tsunami warnings.

## Economic Impacts

- 100% of Ocean Shores' developed land and all of its businesses are located within the tsunami hazard zone, so a future tsunami could devastate the local economy.
- A tsunami may also damage economically important natural resources, such as fish, shellfish, and outdoor recreation areas.
- Many of Ocean Shores' businesses are related to tourism. Depending on the season, large numbers of visitors will need to be taught what to do and where to go if an earthquake and tsunami occur.

**ARE YOU READY?** When you're prepared, you feel more in control and are better able to keep yourself and your family safe. How can you be ready?

- *KNOW WHETHER THE PLACES WHERE YOU LIVE, WORK, OR PLAY ARE IN THE TSUNAMI HAZARD ZONE.*
- *BE PREPARED WHEREVER YOU ARE.* Developing a plan and a disaster supply kit now can make a difference in how you survive.
